

"The GOMACO HW-165 is a darn good machine for urban slipform paving."

GOMACO HW-165 Half-Width Urban Paver slipforms integral curb and streets up to 18 feet wide. Additional concrete placed ahead of the HW-165 on subgrade allows up to a mile per day production.

Colin (left) and Erik Jensen discuss HW-165 paving operations.

Irving F. Jensen Construction Company, Sioux City, Iowa, has actively been involved in concrete paving since 1896. This aggressive company has maintained its high standards through the years and is recognized for its generous contributions to the growth and success of the concrete paving industry.

Colin and Erik Jensen, Irving F. Jensen Construction Co., Sioux City, Iowa, put it this way: "We use the GOMACO HW-165 on our state and municipal urban projects with integral curb and keyways, crossing boxouts, expansion joints, going around supers and through intersections. Our men like this machine because it slipforms an accurate slab and builds a darn good integral curb. They say it's QUICK to set up and change widths, and EASY to transport. The GOMACO HW-165 is fairly priced and it reduced our labor on one project 30%. The HW-165 has the capability of doing a 'super' job."

We think you'll be sold on the new GOMACO HW-165 too . . . for paving city streets . . . interchanges . . . ramps . . . alleys . . . secondary roads . . . and mainline widening, without the expense of forms. The HW-165 wide range of capabilities and profit paving features include: ☐ hydraulically powered frame widening for fast width changes up to 18 feet ☐ integral curb ☐ fully proportional control system with cross slope control for accurate guidance from a single reference line or previously poured slab ☐ interchangeable curb profiles built to your specs ☐ low profile hopper for easy concrete discharge from either or both sides ☐ spreading auger, tamper bar and heavy duty hydraulic vibrators ☐ tracks raised hydraulically for pouring adjacent to existing concrete.
